

My name is Heng Panharanith. I'm currently a third-year student at the Cambodia Academy of Digital Technology majoring software engineering. I have experience in web development, working with technologies like PHP, HTML, CSS, and JavaScript. I also have skills in C/C++ (Arduino) and Java, which I use for automation and IoT projects. Additionally, I work with Flutter for mobile app development. My main interests are UX/UI design, front-end development, and control systems. I'm also the leader of team research based on IoT solutions for flash flood detection, combining my technical skills with real-world problem-solving.

I enjoy solving problems, learning new technologies, and building projects that have a real impact. My goal is to improve my skill , knowledge in IoT and web development while creating innovative and efficient solutions .

One of my weaknesses is that I sometimes focus too much on perfecting small details in my work. While this helps me maintain high-quality results, it can also slow me down. I've been working on improving my time management by setting clear priorities and deadlines to ensure efficiency without compromising quality.

am passionate about web development, IoT, and digital transformation. This job is a great opportunity to apply my skills and contribute to Cambodia's growing tech industry. MPTC's projects, like the Digital Transformation Center and Community Technology Centers, align with my expertise. I want to be part of these efforts to improve digital infrastructure and create innovative solutions while learning from experienced professionals.

I believe I am a good fit for this job because I have the skills in web development, UX/UI design, and IoT, which match the work at MPTC. I am excited to learn more and help solve problems. I am motivated to work with the team and contribute to the projects. I am eager to improve my skills and make a positive impact.

In five years, I would like to have gained more experience in web development and IoT to become an expert. I hope to be working on innovative projects that solve real-world problems and contribute to digital transformation. And also continue learning and growing in this position, making meaningful contributions to the company's success.
